***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

191-193 Haight Street is located on a 37.5' x 87.5' corner lot at the southeast intersection of Haight and Laguna Streets. Built ca. 1890, 191-193 Haight Street is a 2.5-story, wood frame, multiple-family residence designed in the Stick/Eastlake style. The building, clad in channel wood siding, sits on a reinforced concrete perimeter foundation and is capped by a combination gable and hip roof. The primary façade faces north and is three bays wide. The typical fenestration consists of double-hung wood sash windows with molded surrounds. The center bay of the first floor contains a recessed porch approached by wood and concrete steps. This porch features two single-light glazed, two-panel wood doors with molded surrounds, molded architraves, and transoms. The left and right bays are characterized by two-story chamfered bay windows with entablatures, paneled friezes, bracket extensions, spandrel panels, and wood fish-scale pent roofs. These bay windows are capped by projecting gables adorned with oversized verge board detailing and wood fish-scale siding in the pediment. In the center bay of the second floor is a single window with wood surrounds echoing the detailing of the adjacent bay windows. Above the bay windows is an ornate entablature adorned with panel molding, scroll brackets, and vertical molding in the frieze. The primary facade terminates in three projecting gables with carved wood finials in the peak, and a combination hip roof clad with shingles. The center gable is infilled with contemporary glazing. (See Continuation Sheet)

***P3a. Description: (cont'd)**
Along Laguna Street, the building's secondary façade is six bays wide and contains similar ornamentation and detailing as the primary façade on Haight Street. The building's secondary façade is articulated in two distinct massings, divided after the third bay from the left. The basement level features a series of small wood-sash awning windows. On the first floor, two-story chamfered bay windows, detailed in a similar manner as the bay windows on the primary façade, appear in the second, fourth, and sixth bays. In the fifth bay of the first floor are two recessed entryways, accessed by flights of wood stairs with wood balusters. The third bay has paired double-hung windows on the first and second floors. The secondary façade is capped in a similar manner as the primary façade with an ornate entablature and a combination hip roof with projecting gables. Overall, the building appears to be in good condition.
