***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)
365-369 Haight Street is located on a 25' x 120' lot on the south side of Haight Street, between Webster and Buchanan Streets. 365-369 Haight Street is a 3-story, wood frame, four-unit multiple-family residence, designed in the Classical Revival style. The rectangular-plan building, clad in horizontal drop wood siding, is capped by a flat roof. The primary façade faces north, is two bays wide, and is stepped from right to left. The typical fenestration consists of one-over-one, curved, double-hung, wood-sash windows with molded surrounds, sills, and entablatures. In front of the primary façade is an ornamental metal fence with a low concrete perimeter wall foundation and corner piers. In the left bay of the ground floor are a below-grade window and a concrete staircase leading down to the basement level. The right bay of the ground floor features a terrazzo stair with concrete half walls and corner piers that lead up to a recessed entry and entry porch in the right bay of the first floor. The entry porch is highly ornate and is demarcated by two groupings of three free-standing Ionic columns, which support a broad entablature adorned with intermediary cornices and brackets. The entry porch frames the three single-light glazed, two-panel wood doors with molded architraves, panel-molded pilasters, and rectangular transoms. Adjacent to this entry in the left bay of the first floor is a three-story round bay window that is adorned with intermediary cornices, Ionic pilasters, broad entablatures, and dentil molding. A prominent cornice, detailed with dentils and brackets is located between the first and second floor above the porch. (See Continuation Sheet)

***P3a. Description: (cont'd)**
The upper floors are characterized by round bay windows in the left and right bays, which are separated by simple pilasters with rustication at the second floor and egg-and-dart capitals. In the center of the upper floors, the pilasters have a stepped profile, which mediates the differences between the left and right bays. The primary façade terminates in a broad entablature with dentil and egg-and-dart molding, scroll brackets, and a deep-projecting cornice. The building appears to be in good condition.
